

This interactive online service helps patients better comprehend risks involved in medical procedures. IIC incorporates media-rich content, such as interactive videos, diagrams, animations and 3D graphics to illustrate procedures and complications that may arise during medical procedures.

EDUCATIONAL MODULES

Quizzes included in each educational module reinforce material. Patient sees his or her progress and can sign informed consent documents in digital form or complete a certificate. Traditional paperbased IC forms are long and explain complicated procedures using medical jargon that most patients do not understand.

PROVIDES INFORMED CONSENT

Patients often sign forms without carefully reading them. This is not legally an 'Informed Consent', as the patient is not fully aware of the risks involved and is not in a position to make an informed decision.

FEATURES:

- Includes interactive videos, diagrams, animations, and 3D graphics to provide visual understanding of the risks
- Live chat and video sessions with doctors to answer questions
- Notifications sent to doctor for further discussions
- Online patient portal for education and communication
- Alerts for doctors with information about the willingness of the patient to undertake surgery
- Alerts system for patients - reminders of upcoming operations and completion of educational modules
- Highly secure access and management of patient data
- Course of treatment of patients on timeline
- Personalized calendar for Doctors and Patients with list of scheduled events
- Electronic signature page at the end of training
- Quizzes at the end of every module to reinforce patient's understanding
- Explanations of incorrect answers to the patients
- Doctor, Nurse Admin portals for progress monitoring, communication, loading content

ADVANTAGES:

GREATER PATIENT SATISFACTION

Patients have significantly higher satisfaction with the interactive, computer-based interactive IC process. Such satisfaction may translate into higher satisfaction with the doctor or clinic. Patients satisfied with their clinic are least likely to initiate a law suit.

BETTER UNDERSTANDING

Computer-based visualization of medical procedure significantly improves patients' knowledge and comprehension of the medical procedure and the related risks.

LESS ANXIETY AND GREATER SATISFACTION

Multiple studies show that patients feel less anxious when using interactive informed consent, because information is simpler and less overwhelming.

TEST RESULTS TO CONFIRM UNDERSTANDING

Testing patient's understanding after each major procedure segment assesses level of understanding and can trigger follow-up actions.

COMMUNICATION WITH MEDICAL STAFF

Chat and Video sessions allow posting questions to medical staff. Direct interaction builds a better relationship with patient.

INTEGRATION WITH EXISTING ELECTRONIC HEALTH RECORDS

This online platform can be integrated with existing systems.

CUT PAPER COSTS

Online system reduces paper and storage costs dramatically. Signed electronic documents are securely stored online. New modules and quizzes can be added using built-in tools.

ACCESS ANYWHERE

Patient portal provides access anywhere at any time through the Internet using tablets or other mobile devices. InteractiveCare kiosks can be set up right in the doctor's office.
