

eCardioExpert™ is an innovative telemedicine platform which enables remote patient care along with interactive education and communication modules which are dedicated to supporting patients after hospital procedures. It is fully integrated with interactive education and communication module.

DETECTION OF DANGER AND QUICK DIAGNOSIS

eCardioExpert™ enables early detection of potentially dangerous complications and provides advanced diagnosis of conditions that may be life threatening to patients who may be asymptomatic in the early stages.

Postoperative directions are available to patients as interactive visualizations. Information about potential complications, the importance of proper nutrition, exercise and rest to postoperative recovery are easy to assimilate and presented in the form of **posters, animations, 3D visualizations, educational videos, and quizzes.**

The recipients of eCardioExpert™ are mainly hospitals, medical institutions. Users are patients, doctors and other medical personnel monitoring a patient's post-surgery status. The main users of educational modules are patients and their immediate family.

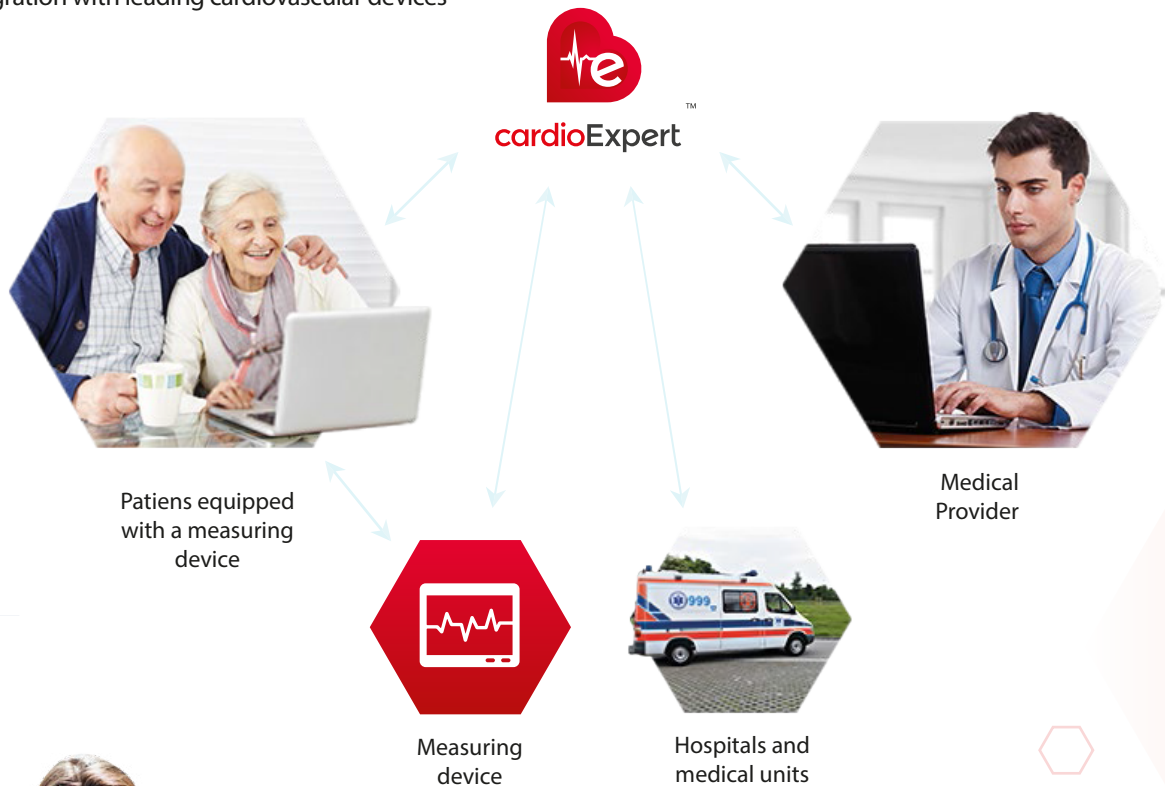

FEATURES:

- Remote testing and monitoring of cardiac patients
- Access to reports from remote patient diagnoses
- Patient data control, search and presentation under one common user interface
- Patient monitoring and scheduling tasks
- Automatic notifications and reminders
- Patient report after examination
- Documented questions and patient responses
- Central storage of all measurements and doctor answers
- Follow-up with the doctor
- Reservation of visits for patients
- Communication between patients and doctors via messages
- Interactive and multimedia education
- System administration of patients and doctors

BENEFITS:

- Lower utilization of costly outpatient visits
- Reduction of the cost of patient health care
- Improved quality of treatment and increased availability of specialist medical services
- Platform extensibility for other fields of medicine
- Interactive patient education
- Improved communication between patients and doctors
- Global access through an internet browser
- Unlimited users
- High performance and data security/safety
- 24/7 International support
- Integration with leading cardiovascular devices
